                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention relates to GLUTX proteins (AAF55865-AAF55871 and AAB66932-AAB66941). The GLUTX proteins are related to the facultative gluose carriers GLUT1-GLUTS and have hexose binding and/or transport function. The GLUTX proteins may be used in the diagnosis, prevention and treatment of hexose transport disorders such as ischaemia, diabetes, hyperglycaemia, hypoglycaemia, a glucose metabolism disorder and/or a neurodegenerative disease. The present sequence is the coding sequence

                                                                                                                                                                                                                                                                                                                                                                                                                            9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                             80
                                                                                                                                                                                                                                                                                                                          20
                                              The present invention relates to GLUTX proteins (AAF55865-AAF55871 and AAB66932-AAB66941). The GLUTX proteins are related to the facultative glucose carriers GLUT1-GLUTS and have hexose binding and/or transport function. The GLUTX proteins may be used in the diagnosis, prevention at reatment of hexose transport disorders such as ischaemia, diabetes, hyperglycaemia, hypoglycaemia, a glucose metabolism disorder and/or a neurodegenerative disease. The present sequence is the coding sequence

```
protein with cancer suppressing function. The invention also comprises a method for preparing the polypeptide by recombination, and an application of the polypeptide in treating diseases such as cancer, etc. Also disclosed in an antagonist of the polypeptide and its medical action. The present sequence represents a CDNA encoding a cancer suppressing protein of the invention
                                                                                                                                                                                          This invention relates to the cDNA and protein sequences of a novel human
                                                                                  New human protein with cancer cell growth suppressing function and polynucleotide encoding it, for treating diseases, such as, cancer.
                                                                                                                                                5; Page 23-24 (disclosure); 39pp; Chinese.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               \delta
                                                                                                                                                                                                                                            The invention relates to novel genes (ABL89449-ABL90853) and proteins (ABB89940-ABB90444) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant)agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital, (b) immune discretes e.g. Addison's disease, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) acatiowascular disorders such as myocardial ischaemias; (d) wound healing of the processing the sclerosis of the such as myocardial ischaemias.
                                                                                                                                                                                                                                                                                                                                                                                                     (e) neurological diseases e.g. cerebral anoxia and epilepsy, and (f) infectious diseases such as viral, bacterial, fungal and parasitic infections. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        108

The present sequence is human protein with hydrophobic domain encoding cDNA clone HP10784. The polynucleotide and polypeptide of the invention may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate polypeptide expression. The polynucleotides continto a host cell and culturing the cell to express the protein. The polynucleotides and its complementary sequences may also be used as DNA probes in diagnostic assays and also used in gene therapy. The polypeptides may also be used as nutitional colypeptides may also be used as antigens in the production of antibodies and in assays to identify modulators of polypeptide expression and crivity. The polypeptides and nucleic acids may be used as nutritional supplements, to modulate cytokine and cell proliferation activity, to modulate immune stimulation or suppression (e.g. for the treatment of microbial infections and autoimmune disorders such as multiple sclerosis, rheumatopoiesis, to modulate tissue growth activity (e.g. for the haematopoiesis, to modulate tissue growth activity (e.g. for the treatment of Parkinson's disease, Huntington's disease and Alzhaimer's disease), to modulate activity and inhibin activity (e.g. for the fertility), to modulate chemotactic and chemokinetic activity, to modulate receptor modulate haemastacic and thrombolytic activity, to modulate receptor condulate inflammation and to inhibit tumour growth Human proteins with hydrophobic domains and the nucleic acids encoding them, useful for preventing diagnosing and treating e.g. cancer, Claim 4; Page 287-289; 563pp; English them, useful for preventing darkling darkling darkleimer's and inflammation.

WPI; 2001-418355/44. P-PSDB; AAE06579.

The present invention relates to GLUTX proteins (AAF55865-AAF55871 and AAB66932-AAB66941). The GLUTX proteins are related to the facultative glucose carriers GLUTI-GLUTS and have hexose binding and/or transport function. The GLUTX proteins may be used in the diagnosis, prevention and treatment of hexose transport disorders such as ischaemia, diabetes, hyperglycaemia, hypoglycaemia, a glucose metabolism disorder and/or a neurodegenerative disease. The present sequence is the coding sequence
                                                                                                                                                                                                                                                                                                                                                                                                                       ||||||||:::

The invention relates to a novel method for determining if a nucleic acid is a marker for a predetermined phenotype/cell type of interest from a biological species. The method comprises performing a global comparison of a group of expressed sequence tags (ESTS) known to be expressed in the phenotype/cell type of interest with all ESTs expressed in normal tissue in order to identify ESTs that are preferentially expressed in the phenotype/cell of interest. A method of the invention is useful for determining whether a nucleic acid is a marker for a predetermined phenotype or cell type of interest from a biological species, preferably Arabidopsis or human. The cell type of interest is an abnormal cell such as a tumour cell, and the predetermined phenotype is a stress-induced phenotype such as hyperosmotic stress or high salt conditions. A method of the inventing is also useful for detecting a tumour cell, and for regulating or preventing the growth of a tumour cell. An antibody of the invention is useful for detecting a tumour cell, and for regulating or tumour-associated markers. A polypeptide of the invention is useful as an immunogen for vaccinating an animal. The present sequence encodes a tumour-associated markers. A polypeptide of the invention is useful as an immunogen for vaccinating an animal. The present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Determining if a nucleic acid is a marker for a phenotype/cell type of interest, by global comparison of expressed sequence tags known to be expressed in the phenotype/cell type with all ESTs expressed in normal

Ή,

The present sequence is that of human solute carrier type 2A (SLC2A)

nucleic acids 15489280. Genetic screens were designed to identify

modifiers of the p53 pathway in Drosophila in which p53 was
coverexpressed. Human orthologues (polymucleotides and polypeptides) of
one such modifier were then identified, including nucleic acid 15489280.
SLC2As are glucose transporter proteins with sugar transporter domains.
SLC2A nucleic acids and polypeptides are attractive drug targets for the
treatment of pathologies associated with a defective p53 signalling
carbway, such as cancer. The invention provides in vitro and in vivo
methods of assessing SLC2A function. Modulation of an SLC2A or its
binding partners is useful for understanding the association of the p53
cathologies. SLC2A-modulating agents that act by inhibiting or enhancing
SLC2A expression, directly or indirectly, e.g. by affecting an SLC2A
function such as transport or binding activity, can be identified using
methods provided. Modulators include small molecules, nucleic acids,
antibodies, antisense oligonuclectides and phosphothicate morpholino 721 G; 440 T; 0 U; 0 Other;

                                            The invention relates to primers for synthesising full length cDNA clones. 830 cDNA molecules encoding a human protein have been isolated and nucleotide sequences of 5'- and 3'-ends of the cDNA molecules have been determined. Primers for synthesising the full length cDNA are useful length clones were obtained by construction of full length cDNA. The full length clones were obtained by construction of full length enriched cDNA libraries that were synthesised by the oligo-capping method. The primers enable the production of the full length cDNA estimers methods. The present sequence is a full length human cDNA of the invention. Note: The sequence data for this patent did not form part of the primer bench as precipilation, but was obtained in CD-ROM format directly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                    240

nucleic acids 12735203 and 9938031. In the present invention, genetic
screens were designed to identify modifiers of the p53 pathway in
screens were designed to identify modifiers of the p53 pathway in
corosophila in which p53 was overexpressed. Human orthologues

(polynucleotides and polypeptides) of one such modifier were then
identified, including nucleic acids 12735203 and 9938031. SLC2As

clack including nucleic acids 12735203 and 9938031. SLC2As

nucleic acids and polypeptides are attractive drug targets for the
treatment of pathologies associated with a defective p53 signalling
pathway, such as cancer. The invention provides in vitro and in vivo
methods of assessing SLC2A function. Modulation of an SLC2A or its
binding partners is useful for understanding the association of the p53
cathologies. SLC2A-modulating agents that act by inhibiting or enhancing
SLC2A expression, directly or indirectly, ea, by affecting an SLC2A
function such as transport or binding activity, can be identified using
methods provided. Modulators include small molecules, nucleic acids,
antisoned.

Patent No. 6610836

GENERAL INFORMATION:
APPLICANT: GATY BRECON et. al
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO KLEBSIELLA
TITLE OF INVENTION: PNEUMONIAE FOR DIAGNOSTICS AND THERAPEUTICS
FILE REPRESENCE: 2709.2004001
CURRENT APPLICATION NUMBER: US/09/489,039A
CURRENT FILING DATE: 2000-01-27
PRIOR APPLICATION NUMBER: US 60/117,747
PRIOR APPLICATION NUMBER: US 60/117,747
SEQUENCE FILING DATE: 1999-01-29
NUMBER OF SEQ ID NOS: 14342
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1545

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      146
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      429
                                                                                                                                                                                                                                                                                                                                            441
